

ProstateZyme

ProstateZyme has been developed to support the prostate, providing both energy and stamina while fortifying the endocrine system.

PROSTATEZYME CONTAINS ONLY PURE PLANT PRODUCTS!

SUPPLEMENT FACTS		
Serving Size 1 Capsule		
Amount Per Serving	% Daily Value	
Zinc (as zinc citrate)	3 mg	20%
Enzyme proprietary blend	38 mg	*
Amylase	2,500 DU	*
Bromelain	300,000 PU	*
Protease 4.5	4,000 HUT	*
Phytase	5 FTU	*
Cellulase	100 CU	*
Lipase AN	10 FCCLU	*
Saw Palmetto Extract	40 mg	*
Ho-Shou-Wu (FO-TI) (root)	30 mg	*
Gingko biloba (leaf) extract	25 mg	*
Siberian Ginseng (root) extract	20 mg	*
Licorice (root)	20 mg	*
Pygeum (bark) extract	20 mg	*
Flaxseed	20 mg	*
* Daily Value not established		

Other ingredients: Vegetarian Capsule (cellulose & water)

Enzyme activity is measured in Food Chemical Codex (FCC) units. Store tightly in a cool, dry place. Keep out of reach of children

100 capsules per bottle. No fillers.

Recommended Usage: Take 1 - 2 capsules three times per day with meals.

Indications:

- Prostatitis
- Benign prostatic hyperplasia
- Stress response modulation
- Inflammation control
- Seminal vesicle support
- Male reproduction disorders
- Calming
- Fatigue
- Lack of stamina
- Impotence
- Kidney imbalance
- Infertility

ProstateZyme is an enzyme-based herbal formulation designed to support the prostate gland, enhance male reproductive system function, modulate side effects of stress hormones, and control inflammatory processes. It may also be used by women to control menstrual and menopausal disorders. It includes highly purified and active enzymes and herbal extracts to enhance the delivery and to optimize the benefits of the active ingredients.

For optimum and timely benefits, ProstateZyme should be taken along with MASTERZYME and/or SUPER HORMONEZYME. As with all TEC products, it is recommended that one maintain an effective digestive system through the regular intake of digestive

enzymes with meals, probiotics at bedtime, and protease between meals to maximize the supply of nutrients via the blood.

Component Benefits:

Saw Palmetto has historically been used to support the functionality of the testicles, to support the prostate in men, and to improve the mammary glands in females. Recent studies have shown that saw palmetto can help control BPH (benign prostate hyperplasia) and frequent urination due to prostate disorders. Other applications include the control of androgens in females, which prevents hirsutism and polycystic ovarian disorders. Saw palmetto is thought to impart these benefits through the inhibition of the intraprostatic transformation of testosterone into dihydrotestosterone, which becomes responsible for prostate enlargement. Another mechanism of saw palmetto's action includes an antiestrogenic effect, which is beneficial, since estrogen has been shown to contribute to BPH. Therefore, saw palmetto promotes the overall health of the reproductive system.

Ho-Shou-Wu (FO-TI) has been known for improving energy levels and as a rejuvenator for sexuality and youthfulness. It is also used to improve cardiac function, control cholesterol levels, and control hypertension.

Gingko biloba (leaf) extract has only been in use since 1988. Scientific research shows it to be another preventive medicine. It is able to work on the nerve centers, to increase brain circulation, and to generally reactivate the well-being of the body. Testing has shown Gingko to be a remarkable inhibitor of the lipid peroxidation of membranes (membrane penetration), and it is widely used in products to deliver oxygen to the brain via the blood system. Studies also show it to be a longevity aid.

Siberian Ginseng has many uses and is in this formulation because of its positive effects on the nervous system. It protects the nervous system from stress, thereby promoting physical and mental efficiency. It also helps impart sound metabolic function, balanced blood pressure, and stabilized glucose levels. It also helps provide energy (especially in the case of chronic fatigue), support the kidney, and control atherosclerosis. In short, Ginseng does it all. Siberian Ginseng has also been known to increase gastrointestinal movement and tone and to increase iron metabolism.

Licorice is included in the formulation in order to help control any inflammation of the prostate and the other organs. Additionally, since it modulates estrogen action, it consequentially improves symptoms of PMS, such as depression, sugar cravings, water retention, and breast tenderness. Although licorice acts as cortisol in controlling inflammation, it also minimizes the side effects of excess cortisol. Other benefits of licorice include support of the liver, soothing of GI tract ulcers, and alleviation of skin disorders, cancer sores, and other viral-induced disorders.

Pygeum (africanum) is rich in several terpenes and ferulic acid esters. It has been used to support the prostate and to improve male fertility and virility. In some studies, pygeum appears to be more effective than saw palmetto in controlling prostate problems. However, pygeum and saw palmetto work together to provide synergistic benefits to the reproductive organs.

Flaxseed contains several lignans together with essential fatty acids. It has been shown to have anti-cancer benefits. In addition, its anti-inflammatory action serves to control prostate problems, to lower cholesterol, and to prevent platelet aggregation.
